Prompt: generate a sample pdf

Here are a few quick ways to get a sample PDF depending on what you need:

Option 1: Print/Save an HTML Template to PDF (Easiest & No Install)

Save the code below as `sample.html`, open it in any web browser, and press **Ctrl + P** (or **Cmd + P** on Mac) $\rightarrow$ select **"Save as PDF"**:

```
``html
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Sample Document</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 40px;
      color: #333;
      line-height: 1.6;
    }
    h1 {
      color: #2c3e50;
      border-bottom: 2px solid #3498db;
      padding-bottom: 8px;
    }
    table {
      width: 100%;
      border-collapse: collapse;
      margin-top: 20px;
    }
    th, td {
      border: 1px solid #ddd;
      padding: 10px;
      text-align: left;
    }
    th {
      background-color: #f4f6f7;
    }
  </style>
</head>
<body>
  <h1>Sample PDF Document</h1>
  <p>This is a sample document generated to test PDF rendering and layout.</p>

  <h2>Overview Table</h2>
  <table>
    <thead>
```

```

<tr>
  <th>Item</th>
  <th>Description</th>
  <th>Status</th>
</tr>
</thead>
<tbody>
<tr>
  <td>Task 01</td>
  <td>Generate initial PDF mock-up</td>
  <td>Completed</td>
</tr>
<tr>
  <td>Task 02</td>
  <td>Verify styling and margins</td>
  <td>In Progress</td>
</tr>
</tbody>
</table>
</body>
</html>
'''

```

Option 2: Generate via Python (`reportlab`)

If you want to generate a PDF programmatically:

```

'''bash
pip install reportlab
'''

```

```

'''python
from reportlab.lib.pagesizes import letter
from reportlab.pdfgen import canvas

def create_sample_pdf(filename="sample.pdf"):
    c = canvas.Canvas(filename, pagesize=letter)
    width, height = letter

    # Title
    c.setFont("Helvetica-Bold", 20)
    c.drawString(100, height - 100, "Sample PDF Document")

    # Body text
    c.setFont("Helvetica", 12)
    c.drawString(100, height - 140, "This PDF was generated using Python and ReportLab.")
    c.drawString(100, height - 160, "You can customize fonts, colors, shapes, and tables.")

    # A simple line
    c.setStrokeColorRGB(0.2, 0.4, 0.8)
    c.setLineWidth(2)
    c.line(100, height - 110, 500, height - 110)

    c.save()
'''

```

```
print(f"Generated: {filename}")

if __name__ == "__main__":
    create_sample_pdf()

```

Option 3: Minimal Valid Base64 PDF (Copy & Paste into Browser)

Paste this URL into your browser's address bar to view/download an instant blank sample PDF:

```
```text
data:application/pdf;base64,JVBERi0xLjQKMSAwIG9iago8PAovVHlwZSAvQ2F0YWxvZwovUGFnZXMgM
iAwIFIKPj4KZW5kb2JqCjlgMCBvYmoKPDwKL1R5cGUgL1BhZ2VzCi9LaWRzIFszIDA shockvQ291bnQg
